

HiredLens
AI Career Intelligence

● SHIPPED TO A CLIENT

ENGINEERING CASE STUDY

The tri-theme AI dashboard.

One product, three unidentical design languages - switchable live. A motion-rich, 3D-accented Next.js workspace for resume scoring, keyword analysis, AI rewrites and mock interviews.

LIVE DEMO - hiredlens.vercel.app

What is HiredLens?

An AI career-intelligence dashboard that scores a resume against a single job description - match score, ATS safety, missing keywords, AI rewrites, and a mock-interview studio. Built to demonstrate best-in-class, AI-driven frontend craft.

Already shipped to a client.

This is a public demo version, deployed on my own Vercel so anyone can explore exactly what I build - with realistic mock data and no real authentication.

BUILT TO IMPRESS

- UI/UX clients & founders who want a modern, premium AI dashboard.
- Designers & teams evaluating motion, 3D and design-system depth.
- Recruiters looking for production-grade React / Next.js craft.

backends - pure frontend

One product. Three design languages.

Most portfolios ship one look. HiredLens ships three - color, type, radius, shadow, surface and motion all swap from a single token engine, live, with a circular reveal.

Aurora

SPATIAL GLASS

Dark glassmorphism with blur, depth and neon aurora light.

GLASS

BLUR

NEON

--radius - --surface - --grad

Porcelain

AIRY MINIMAL

Light, calm, Apple-grade restraint - soft shadow & whitespace.

SOFT

CLEAN

LIGHT

--radius - --surface - --grad

Pulse

VIVID ENERGY

Bold gradient mesh, grain and expressive type with spring motion.

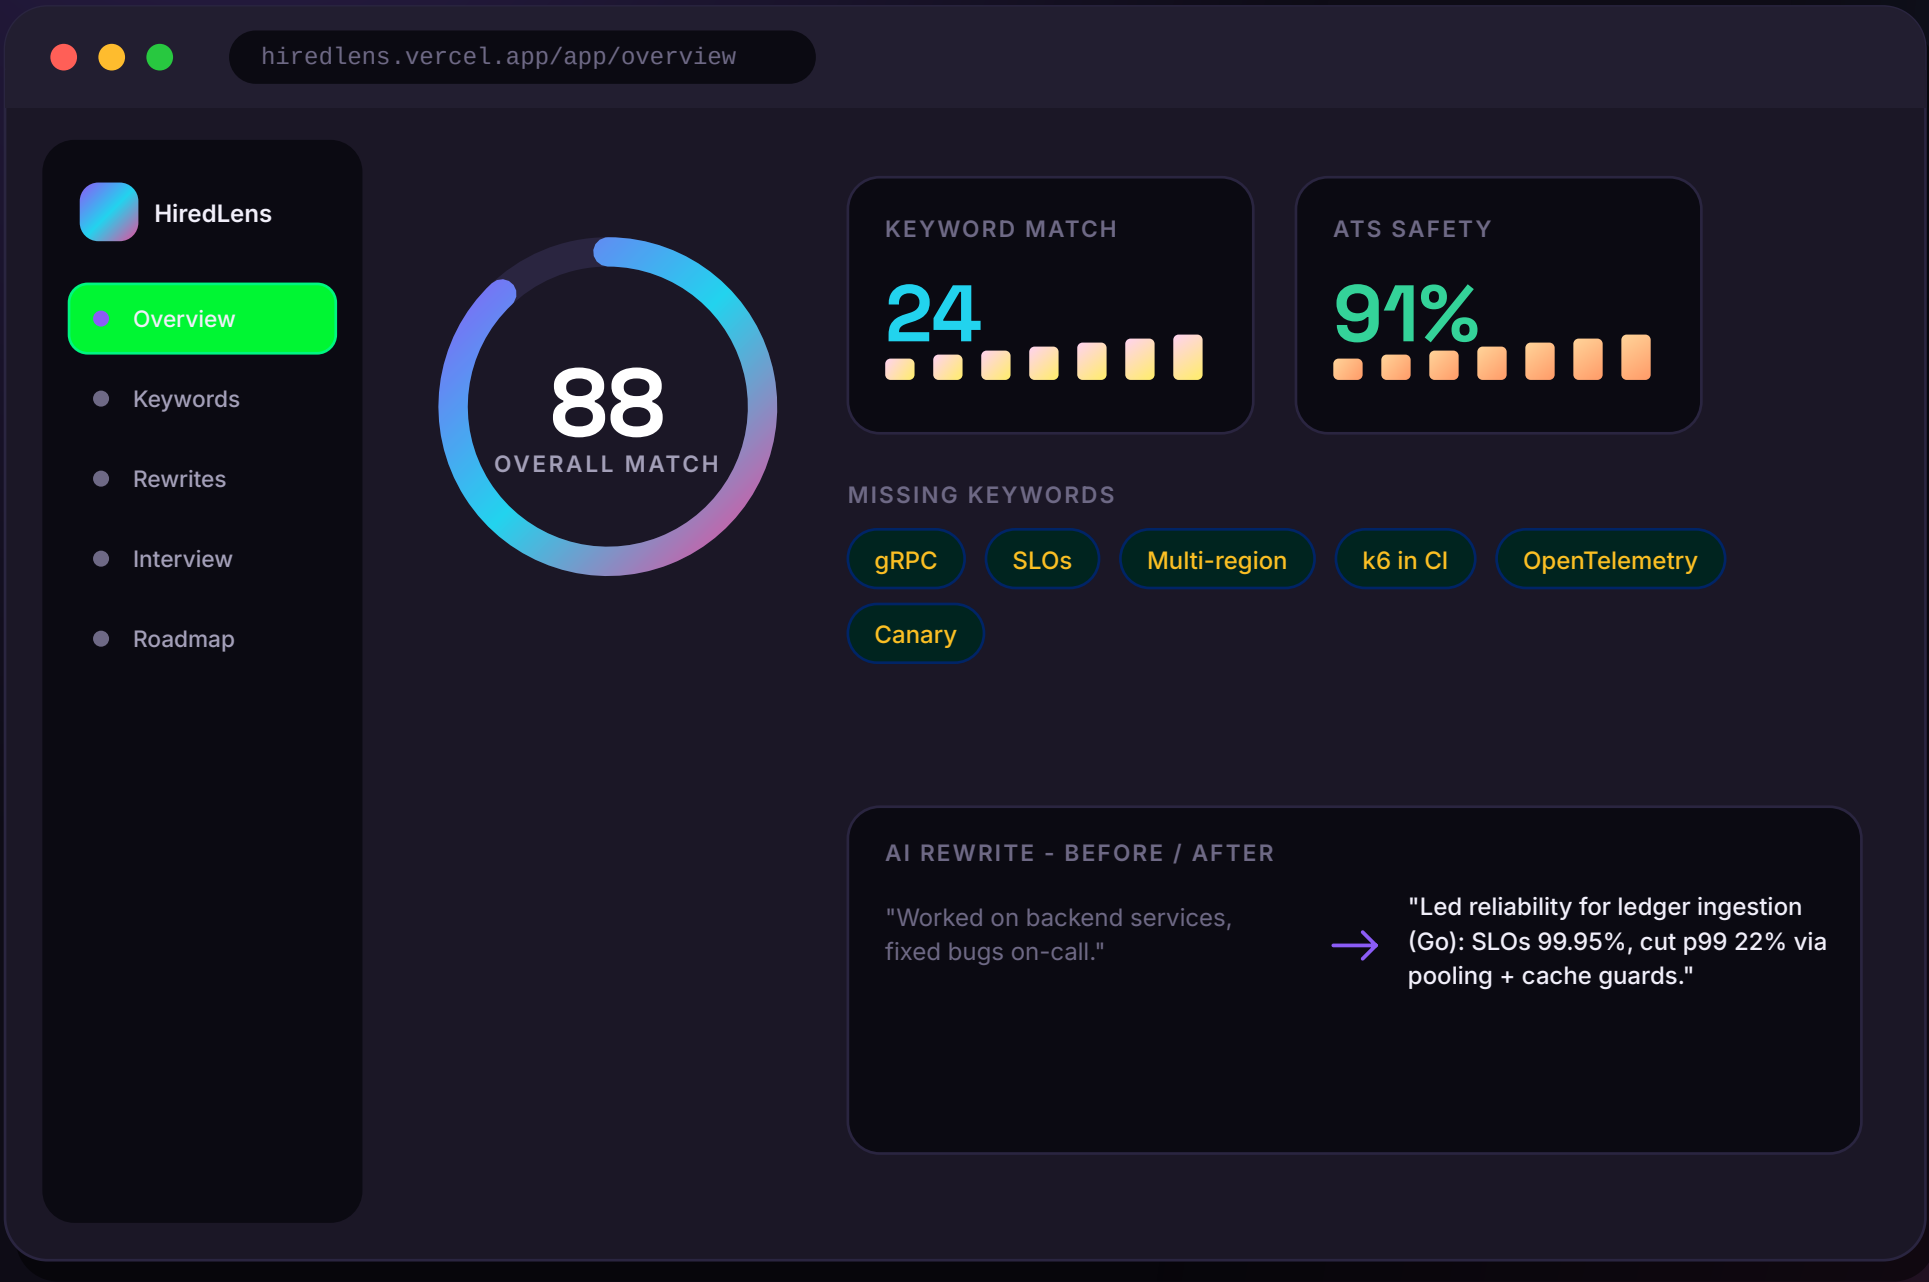

GRADIENT

GRAIN

SPRINGY

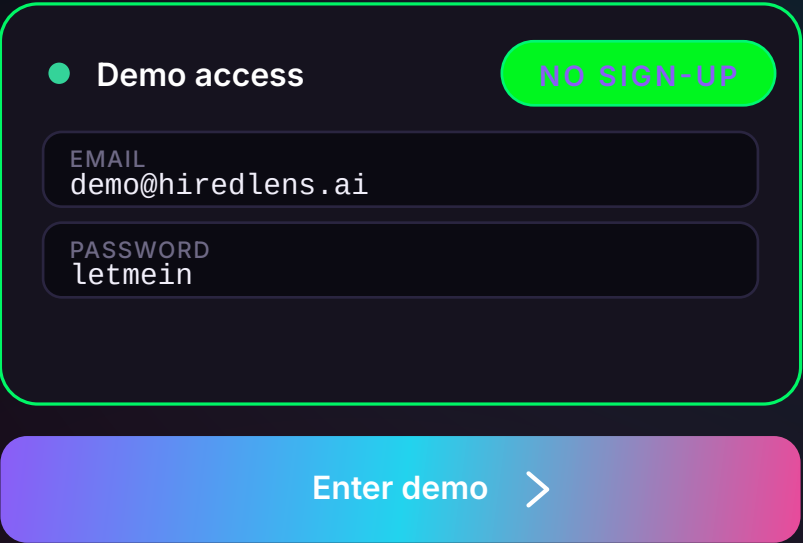

--radius - --surface - --grad

See it running - one click in.

Frictionless entry

A floating, semi-transparent demo card drops anyone straight into the dashboard - no sign-up.

hiredlens.vercel.app

Try switching themes in the top bar - the whole app re-skins.

Built for the whole job hunt.

Keyword analysis

Semantic match of resume vs. posting - matched/missing chips weighted by impact.

AI rewrites

Before/after bullet rewrites with keyword injection and quantified outcomes.

Overview score

North-star match, ATS safety and prioritized gaps with animated gauges.

Mock interviews

Voice or text practice with a role-tuned AI persona & live waveform.

Skill roadmap

A sequenced upskilling plan inferred from your gaps & milestones.

Q&A prep

Behavioral & system-design prompts aligned to staff-level rubrics.

A modern, frontend-heavy stack.

⚡ Heavy bundles are a deliberate, acceptable trade-off: there is no backend, so the budget goes entirely into motion, 3D and design fidelity. The WebGL path is code-split (ssr:false) and reduced-motion safe.

How it's put together.

DESIGN PATTERNS APPLIED

- ✓ **Token-driven theming**
One CSS-variable source of truth; zero duplicated UI across 3 themes.
- ✓ **Compound + variant components**
CVA variants (Button/Card/Badge) keep a single API, many looks.
- ✓ **Composition over config**
Reusable motion primitives (Reveal, Tilt, Stagger) compose per page.
- ✓ **Code-splitting & lazy 3D**
WebGL dynamically imported (ssr:false) behind a fallback.
- ✓ **Progressive enhancement**
View-Transitions + reduced-motion fallbacks everywhere.
- ✓ **Server/Client boundary**
Server passes typed data; client owns interaction & animation.

A token engine that re-skins everything.

A single class on <html> swaps a complete block of ~30 semantic tokens. Components never hard-code color - they read hsl(var(--primary)), var(--radius), .glass, etc. Switching uses the View-Transitions API for a circular reveal from the cursor.

globals.css

```

.aurora
  --primary: 264 90% 66%; --radius: 1.2rem;
  --surface: 250 30% 10%; --font-display: Space Grotesk;
.porcelain
  --primary: 222 83% 53%; --radius: 0.85rem;
.pulse
  --primary: 22 100% 58%; --radius: 0.5rem;

```

WHAT A THEME CONTROLS

Color
--background ... --ring

Radius
--radius

Surface
--surface / glass alpha

Gradient
--grad-1/2/3

Glow & shadow
--glow / --shadow-color

Typography
--font-display

Premium motion, everywhere.

Reveal / Stagger

Scroll-triggered fade + rise, staggered children.

AnimatedNumber

Count-up on first in-view.

Magnetic + Tilt

Cursor-magnetic buttons; 3D tilt with moving light.

Spotlight

Pointer-following radial highlight on cards.

Animated charts

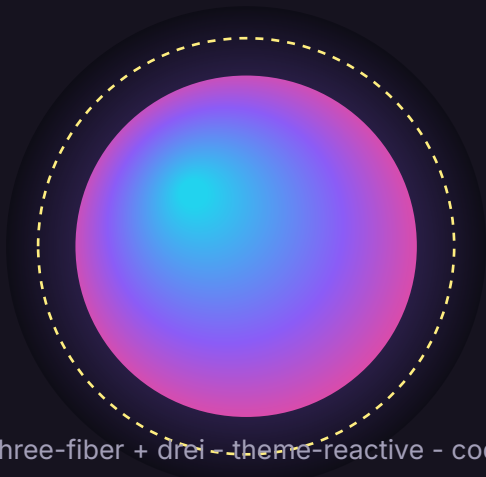

SVG gauge / area / bars that draw into view.

Command palette

Command-K nav + theme switching (cmdk).

WEBGL HERO ORB

react-three-fiber + drei + theme-reactive - code-split

SCORE TREND

Component library & quality bar.

REUSABLE COMPONENTS (SELECTED)
